PHARMACEUTICAL MANAGEMENT AND MARKETING

#### Study programme: Pharmaceutical management and marketing

#### Course title: Digital Technology in Pharmacy

#### Teachers: Marinkovic D. Valentina, Tadic B. Ivana, Odalovic M. Marina

#### Course status: elective

Semester: II	Year of studies: I
ECTS points: 5	Course code: СФММИ1

#### Requirements: no

#### Course aims:

Introduction to the benefits of digital technologies in the health care systems, pharmaceutical industry and society. Protection of electronic data of patients/consumers from potential abuse in internet environment.

#### Course outcomes:

Introduction with the digital technologies in modern society. Knowledge about economic, social, legal and marketing framework for e-commerce in the pharmaceutical care and health care.

#### **Course contents:**

#### Lectures

Introduction to pharma e-business. Conducting business on the internet (buying, selling, business organization in the network environment, organization of business communications to all stakeholders, customer care). Combined use of information technology and telecommunication. Economic, legal and social aspects of pharmaceutical e-business and the regulatory framework. Internet platform for commercial activities and promotion of the health life industry. Data integrity and consumer protection. Methods for efficient operations and savings costs. Codes which regulate business, which is achieved through the Internet. E - business in pharmacy practice and e-pharmacy. Ethical aspects of e - pharmacy and regulatory framework. Basic concept and principles of e-health and m-health.

#### Practical classes

Practical classes includes learning, analyzing and discussing practical examples of theoretical lessons. Analysis of promotional activities on the electronic media of manufacturers of medical products. Web environment, e -platform for work activities as a source of competitive advantage. Analysis of regulation e - sales of medical products/services. Quality Management of online Information . Internet environment, an electronic platform for the work processes as a source of competitive advantage. Analysis of regulation e of regulation about internet sales of medical products/services.

PHARMACEUTICAL MANAGEMENT AND MARKETING

#### Study programme: Pharmaceutical management and marketing

#### Course title: Pharmaceutical marketing

Teachers: Marinkovic D. Valentina, Dusanka M. Krajnovic, Ivana B. Tadic

#### Course status: mandatory

Semester: I	Year of studies:
ECTS points: 10	Course code: CΦMMO3

#### Requirements: no

#### Course aims:

Introduction to the philosophy and methodology of market research of pharmaceuticals, health and pharmaceutical services. Introduction to the regulatory and ethical framework of pharmaceutical marketing practices and the concept of social marketing. introduction of market and the methodology for health promotion and disease prevention. Basics of pharmacoepidemiology and pharmacovigilance.

#### **Course outcomes:**

Developing the techniques of segmentation and market research. Critical analysis of marketing, post-marketing, pharmacoeconomic and similar studies. Developing of knowledge and skills in the design, implementation and evaluation of promotional campaigns (approaches: producers, users / consumers, and society). Ability to analyze regulatory and ethical standards, and lounching the products toward the professionals and the general public.

#### **Course contents:**

Lectures

General principles of pharmaceutical marketing (manufacturers, patients and society aspects); marketing mix, models, methods and techniques of marketing. Marketing and its role. General concepts of marketing. Market segmentation. Strategy and tactics. Analysis of client needs (prescribers, financiers, users - patients). Market research of drugs versus analytical marketing. Principles in pharmacoepidemiology and pharmacovigilance. Postmarketing monitoring of medicines. Public health marketing (social marketing). General concepts of social marketing. Components and techniques of social marketing. Regulation and ethics in advertising and marketing of pharmaceutical products and services.

#### Practical classes

As part of the practical classes there you will examine, analyze and discuss practical examples of theoretical lessons. Creating a mission, vision, strategy and tactics of the organization. Segmentation of the market, analysis of target markets, analyzis of customer needs. Market research using the methods: Boston Consulting Group matrix, SWOT analysis, benchmarking and portfolio analysis. Preparation the plans for a promotional campaign (products and services). Critical analysis of pharmacoepidemiological studies. Critical analysis of marketing activities in terms of ethical principles, regulatory framework and users protection. Sales techniques in regulated environment.

PHARMACEUTICAL MANAGEMENT AND MARKETING

#### Study programme: Pharmaceutical management and marketing

#### **Course title:** Pharmaceutical management

#### Teachers: Marinkovic D. Valentina, Dusanka M. Krajnovic, Ivana B. Tadic

#### Course status: mandatory

Semester: I	Year of studies:
ECTS points: 10	<b>Course code:</b> CΦMMO1

#### Requirements: no

#### Course aims:

Introduction of general principles of pharmaceutical management. Indroduction of quality management systems (QMS).

#### **Course outcomes:**

Eficient and efective organisation of pharmaceutical activities for succesful company in global- local enviroment. Preparation of strategies and policies for strategic positioning, business/ development plan.

#### **Course contents:**

Lectures

General concept of management; management of health system. Definition of management. Concept of quality management in pharmacy. Concept of Total quality management and business excellence. Introduction of basic management tools and implementation in real business systems. Banchmarking. Balanced score cards. Key performance indicators - definition, identification and monitoring. Pharmacopolitics. Pharmaceutical and pharmacy management. Supply chain management. Selection, procurment, distribution and use of pharmaceuticals. System of bid and tender of medicines and medical devices. Mission, vision and leadership in pharmacy; globalisation and outsource in pharma business.

The modern concept of pharmacy practice. Planning and funding of pharmaceutical business systems / operations. Cost analysis and rational use of medicines. Factors that influence the drug use. Fundamentals of financial management and sources of funding. Fundamentals of Human Resource Management. Personal characteristics of managers. Leadership.

#### Practical classes

Study, analysis and discussion of practical examples by mock-up of pharma business activities. Company structure analysis: pharmacy, wholesale, industry. Strategy, mission, vision in pharma companies. Structure, processes, outcomes of business systems

#### Study programme: Pharmaceutical management and marketing

#### Course title: Strategic management

Teachers: Marinkovic D. Valentina, Krajnovic M Dušanka, Odalović M. Marina

#### Course status: mandatory

Semester: I	Year of studies:
ECTS points: 5	Course code: CФMMO2

#### Requirements: no

#### Course aims:

Planning and organizing activities in the pharmaceutical and healthcare industry at macro, meso and micro level.

#### **Course outcomes:**

Knowing the basis for rational use of drugs and the importance of pharmacoeconomics and pharmaceutical business.

#### **Course contents:**

#### Lectures

Strategic planning and directions of the development of pharmaceutical business. Situational analysis: analysis of strength determination, weaknesses of threats and chances of business (SWOT) and analysis of political economic and social and technological impacts (PEST). Approaches and models in project management. Project management in support of the realization of the business plan. Elements of business plan and importance of business plan in business development. The importance of managing the changes in the era of globalization. Change control. Management of the business continuity and Sustainable Development. Crisis management - behavior in critical situations. Safety management - theft, burglary, corruption. The concept and standards of social responsibility. The use of information technology as a support system in the modern pharmaceutical enrolment. Project management to support the implementation of the business plan.

#### Practical classes

During the practical courses students will study, analyze, discuss the practical examples and simulate the situation in pharmaceutical organizations. Creating and defending a business plan. Creating a business plan and analyzing all its constituencies: business analysis, organization environment analysis, financial plan, marketing plan procurement proposal, feasibility and sustainability of the created plan.

PHARMACEUTICAL MANAGEMENT AND MARKETING

#### Study programme: Pharmaceutical management and marketing

#### Course title: Information systems and technology in pharmacy

Teachers: Marinkovic D. Valentina, Tadic B. Ivana

#### Course status: mandatory

Semester: II	Year of studies: I
ECTS points: 5	<b>Course code</b> : CΦMMO4

#### Requirements: no

#### Course aims:

Introduction to information systems in the pharmaceutical business. Introduction to standards in the pharmaceutical and health informatics. The use of databases and internet/intranet network in the pharmaceutical business.

#### **Course outcomes:**

The use of pharmaceutical and healthcare information systems. Knowledge and understanding of information technology and the potential for the development of the pharmaceutical business. Evaluation of information in business, especially from the pharmaceutical web based company.

#### Course contents:

Lectures

Information systems and technology (aspect from manufacturers, patients, and society). Information systems in pharmacy (health care information systems, pharmaceuticals information systems, medicines, medical devices, classification, code lists, databases coding) - design, architecture and structure. Business process re-engineering – change into a competitive pharmaceutical organization. Methods and software for the pharmaceutical and health information system. Databases (general concepts, logistics framework, routers transfer data), analysis and processing. Internet-intranet in the pharmaceutical business. Standards and regulations in the pharmaceutical informatics.

#### Practical classes

Information systems and technology (aspect from manufacturers, patients, and society). Information systems in pharmacy (health care information systems, pharmaceuticals information systems, medicines, medical devices, classification, code lists, databases coding) - design, architecture and structure. #### Teachers: Dušanka M. Krajnović, Valentina D. Marinković

#### Course status: elective

Semester: II	Year of studies:
ECTS points: 5	Course code: CФMMи5

#### Requirements: no

#### Course aims:

Introduction of principles and techniques about Human resource management (HRM) in pharmaceutical organisations and pharmacy environment. Introduction of HMR processes. Definition of behavioral and functional competencies and performances of pharmacist in different business environment.

#### **Course outcomes:**

Aquiring of basic methods, tools and techniques in HRM processes., and how organizational culture influences organizational learning and leadership Candidates will be trained to define, review, evaluate and improve the competencies and performances of pharmacist in different pharma business environment

#### **Course contents:**

Lectures

Humen resources- definition and importance. Human resources processes in modern pharma business enviroment. Using of phsychological tests in human resources evaluation. Resource optimisation as a consequence of globalisation in pharmaceutical supply chain. Delegation and empourment. Process and principles of feed-back. Conflict solving, rewards and punishments. Strike-legal framework in health institution. Labor contract suspension. Labor legislation- Labor law, labor contract. Motivation. Time management. Competences of pharmasist. Required skills and characteristics of pharmasist. Key performance indicators and employee assessment. Planing, realisation and evaluation of training. Salary calculation.

#### Practical classes

Introduction of processes, roles and responsibilities in human resources management, using real examples in pharmaceutical and healthcare systems. Self assessment of manager's profil and forming od successful teams. Simulation of conflict situation- conflict solving; giving the feed- back.

PHARMACEUTICAL MANAGEMENT AND MARKETING

#### Study programme: Pharmaceutical Management and Marketing

#### **Course title:** Business Communication in pharmacy

#### Teachers: Dušanka M. Krajnović, Marinković D. Valentina

#### Course status: elective

Semester: II	Year of studies: 1
ECTS points: 5	Course code: CФMMИ2

#### Requirements: no

#### Course aims:

Importance of communication with patient/citizen, health employees and business partners. Introduction to the styles of communication and handling information. Significant and concept of public relations.

#### **Course outcomes:**

Enablement for effective communication with citizen/ patients and health employees (developed verbal and non verbal skills of communication). Understanding corporative culture, social responsibility and cultural implication in communication, as well as pharmacotherapy and heath literacy.

#### **Course contents:**

Lectures

The concept and significance of communication in pharmaceutical business (the aspect of the manufacturer, the patient and the society). Types of communication (verbal, non verbal and written communication) and business culture (ethical, cultural, social aspects and pharmacy culture). Quality management of communication (standards of good communication). Global business environment (east and west culture). Health related quality of life (general and specific knowledge and skills of communication). Pharmaceutical culture (integrated communication, communication in virtual, public and health settings). Specific processes communication in relation to the target group of patients.

#### Practical classes

Examples of theoretical units are analyzed and discussed in practical training. Practical examples of different forms, styles, verbal and written communication. Designing plan and program of marketing communication (new medicine; the new image of the public pharmacy). Analysis of practical examples of communication. Preparations for communication with patients and health employees (specificity). Consideration of elements of written communication. Example of written communication and analysis. Use of tools for researching attitudes, habits, and behaviors of patients. Simulation of a press conference and crisis management.

PHARMACEUTICAL MANAGEMENT AND MARKETING

#### Study programme: Pharmaceutical management and marketing

#### Course title: Selected Chapters of Pharmacoeconomics

#### Teachers: Dragana M. Lakić, Tadić B. Ivana, Odalović M. Marina

#### Course status: elective

Semester: II	Year of studies:
ECTS points: 5	Course code: СФММИ6

#### Requirements: no

#### Course aims:

Introduction to basic terms and concepts: economics, health economics, pharmacoeconomics. Introduction and consideration of perspectives in pharmacoeconomic analyzes. Introduction to methods of pharmacoeconomic analysis. Identifying and defining costs and outcomes of importance for pharmacoeconomic analysis. Gaining skills in carrying out simple pharmacoeconomic analyzes.

#### **Course outcomes:**

After this course, participants will be able to: Based on the identification of outcomes, propose an adequate pharmacoeconomic analysis; in relation to the perspective of the study identify all costs; to independently carry out simple pharmacoeconomic analyzes.

#### Course contents:

Lectures

Introduction to pharmacoeconomics. Outcomes and costs. Calculating the cost of treatment. Types of costs (direct and indirect). Subcategories of costs (total, average, marginal, incremental). Assessment of costs. Discounting. Perspective in calculating costs. Pharmacoeconomic methods: cost-minimization analysis, cost-effectiveness analysis, cost-benefit analysis and cost-utility analysis. Methods of assessment of patient preference and utility (method time balance, visual analog scale, standard gamble). Health related quality of life.

#### Practical classes

Calculating the cost of treatment. Practical work - application of cost-minimization analysis. Practical work - cost-effectiveness analysis. Practical work - cost-benefit analysis. Practical work - cost-utility analysis. The method for assessing the patient preferences. Determination of the quality of life. Types of questionnaires to measure preferences.

PHARMACEUTICAL MANAGEMENT AND MARKETING

# Study programme: Pharmaceutical management and marketing Course title: Selected Chapters of Pharmacoepidemiology Teachers: Marina M. Odalović, Ivana B. Tadić, Dragana M. Lakić Course status: elective Semester: II Year of studies: I ECTS points: 5 Course code: CФММИ7 Requirements: no Course aims: Acquiring knowledge about basic concept and principles in pharmacoepidemiology. Acquiring knowledge about sample

selection, data sources, and methodological approaches in pharmacoepidemiology. Acquiring knowledge about sample for critical evaluation of studies and data in pharmacoepidemiology. Acquiring knowledge and skills for implementation of pharmacoepidemiology in practice.

#### **Course outcomes:**

Understanding of basic concept and principles in pharmacoepidemiology. Understanding of sample selection, data sources, and methodological approaches in pharmacoepidemiology research. Capability for critical evaluation of studies and data in pharmacoepidemiology. Capability for for implementation of pharmacoepidemiology in practice.

Course contents:

Le

ct

ur

es

Pharmacoepidemiology – basic concept and principles. Basic principles of clinical epidemiology relevant for pharmacoepidemiology. Pharmacoepidemiology in healthcare system, pharmaceutical industry, regulatory bodies, and low.

Data sources in pharmacoepidemiology (spontaneous reporting, data bases, pharmacoepidemiology studies). Descriptive studies (ecological studies, case reports, case series, cross-sectional studies). Analytical studies (case-control studies, cohort studies). Causality measures in pharmacoepidemiology (absolute risk, relative risk, odds ration). Sample size in pharmacoepidemiology studies. Implementation of pharmacoepidemiology in practice (drug utilization studies and relevant measures (defined daily dose), evaluation and improvement of drug proscribing, risk management, pharmacoepidemiology and reimbursement policies).

#### Practical

classes

Critical evaluation of pharmacoepidemiology studies with the focus on methods and published results. Design of pharmacoepidemiology studies. Calculation of risks in pharmacoepidemiology studies. Acquiring knowledge and skills for implementation of pharmacoepidemiology in practice. Drug utilization research by using of defined daily doses.

PHARMACEUTICAL MANAGEMENT AND MARKETING

Study programme: Pharmaceutical management and marketing

#### Course title: Negotiation and decision making in pharmacy

#### Teachers: Valentina D. Marinković, Krajnović M. Dušanka

#### Course status: elective

Semester: II	Year of studies: I
ECTS points: 5	Course code: СФММИ4

#### Requirements: no

#### Course aims:

Indroduction and aquiring of methods and techniques for efective negotiation in differnt business enviroment. Introduction of importance of decisions made DM in healthcare and pharmaceutical systems. Intoduction of decision making process in Health Technology assessment. Aquiring team work capability in decision making process. Identification of repercutions about decisions made on health and safety. Introduction of flow chart diagrams for decision in healthcare system, baased on practical examples.

#### Course outcomes:

Implementation of basic methods, tools and technics in process of negotiation, contracting and decision making; indroduction of decion making models in strategic, tactical and operating management levels; importance of decision on health and pharmaceutical sustainability.

#### Course contents:

Lectures

Processes, type and ways of negotiation in modern pharma enviroment. Planning and basic element in negotiation process (licence agreements, representative agreement, securecy agreement, supply agreement, comercial agreement, Technical agreement, quaity agreement). Decision making process. Teamwork in decision making process- share decision making. importance of decisons made in healthcare and pharmaceutical system. Social, phychology and economic aspects in DM process. Evaluation of decison made.

#### Practical classes

Study, analysis and discussion of practical examples in negotiation, contracting and decision making- role and responsibilities in teamwork; real healthcare and pharmaceutical system in Serbia. Preparation and review of different agreements. Comparison of different DM models; share decision making in relation on pharmacist - patient.

PHARMACEUTICAL MANAGEMENT AND MARKETING

#### Study programme: Pharmaceutical Management and Marketing

#### Course title: Social Marketing and New Public Health

#### Teachers: Dušanka M. Krajnović, Marinković D. Valentina

#### Course status: elective

Semester: II	Year of studies:
ECTS points: 5	Course code: CФMMи8

#### Requirements: no

#### Course aims:

Introduction to basic principles, philosophy and politics of public health and the concept of the new public health. Mastering the methods of public-health research and design, monitoring and evaluation of public health programs and interventions. Introduction to the basic techniques of social marketing and ethical dilemmas that may appear.

#### Course outcomes:

The efficient design of the program of public - health campaigns (for example. to mark certain dates in the calendar of health, etc..); and management skills program implementation and evaluation of the Action Plan preventive health activities for a specific population / group.

#### **Course contents:**

Lectures

Philosophy and public health policy and the new public health. Evidence-based health care and public health. Health care according to levels of prevention and for specific population groups (women and children, actively working people, the elderly, the poor, the refugees, the Roma, people living with disabilities). Social impacts, behavior and health (culture, family, peers), social concept of health and illness, beliefs, attitudes, knowledge, behavior (relationship skills and behaviors), risky behavior at individual, group and population level. Communications and media and their role in public health policy. Health promotion and health education. Environments for health. Social marketing. Methods of public health research (qualitative and quantitative) and design, implementation, monitoring and evaluation of public health programs. Ethics in health promotion and social marketing.

#### Practical classes

Methods of exercises involving active analysis of case studies, participation in the creation and design of pilot projects and programs in the field of public health, with special reference to the contribution of pharmaceutical health system in designing and implementing health-education intervention and promotion programs, health and social marketing purposes.

PHARMACEUTICAL MANAGEMENT AND MARKETING

#### Study programme: Pharmaceutical management and marketing

#### Course title: Quality Management in Pharmacy

#### Teachers: Valentina D. Marinković, Odalović M. Marina

#### Course status: mandatory

Semester: II	Year of studies: I
ECTS points: 8	Course code: CΦMMO5

#### Requirements: no

#### Course aims:

Indroduction of quality management systems (QMS) philosophy. Understanding of importance about standardised management systems (SMS) and good practices (GxP) in pharmacy; Education and training about Integrated management systems (IMS). Introduction of basic tools in QMS and key performance indicatiors (KPIs) understanding.

#### **Course outcomes:**

Implementation of QMS methods and tools and quality improvement in pharmaceutical operations/activities. KPI monitoring in pharmacy services and pharmaceutical manufactory. Mapping, monitoring and evaluation of quality KPIs.

#### Course contents:

Lectures

QMS philosophy and quality system technology. Standardized quality management systems (SMS)-ISO 9001, ISO 22000, ISO 17025, ISO 13845. Integrated management system about quality, ecology, health & safety. QMS in health industry - Donabedian philosophy. Certification and accreditation. Good manufacturing practice- Manufacturing License. Good Distribution practice-Distribution Licence. Comparative analisys of SMSs and GxP. Pharmaceutical Quality System- implementation of quality principles in all phases in medicines lifecycles. Facility, premices, equipment in pharma organisation. Key personnel- training system. Quality system documentation. Quality specifications. Calibration and maintenance (plans, contracts, deviations). Qualification and validation. Change control system. Deviation management- corrective and preventive actions. Continiouse improvement - tools and technics. Monitoring and evaluation of Pharmaceutical Quality system.

#### Practical classes

Study, analysis and discussion of practical examples in QMS. Comparative analysis of SMS, TQM, GxP and IT systems in pharma organisations examples. Consideration of quality indicators in pharmacy service. Indicators and monitoring of patient safety. Qualification and validation in pharma projects. Process maping. Performance evaluation in pharmaceutical companies (wholesale, manufactory).
